462 hunt for a length of time, and she will be sure to have
224 provisions and every thing else that is necessary in complete readiness, and well packed up to carry to the spot; for the man, as soon as he enters the woods, has to be looking out and about for game, and therefore cannot be encumbered with any burden; after wounding a deer, he may have to pursue it for several miles, often running it fairly down. The woman, therefore, takes charge
462 of the baggage, brings it to the place of encampment,
251 and there, immediately enters on the duties of housekeeping, as if they were at home; she moreover takes pains to dry as much meat as she can, that none may be lost; she carefully puts the tallow up, assists in drying
222 the skins, gathers as much wild hemp as possible for the
283 purpose of making strings, carrying bands, bags and other necessary articles, collects roots for dyeing; in short does every thing in her power to leave no care to her husband but the important one of providing meat for the family.

461 After all, the fatigue of the women is by no means to
462 be compared to that of the men. Their hard and difficult employments are periodical and of short duration, while their husband's labours are constant and severe in the extreme. Were a man to take upon himself a part of his wife's duty, in addition to his own, he must necessarily sink under the load, and of course his family must suffer with him. On his exertions as a hunter, their existence depends; in order to be able to follow that rough employment with success, he must keep his limbs as supple as he can, he must avoid hard labour as much as possible, that his joints may not become stiffened, and that he may preserve the necessary strength and agility of body to enable him to pursue the chase, and bear the unavoidable hardships attendant on it; for the fatigues of hunting wear out the body and constitution far more than manual labour. Neither creeks nor rivers, whether shallow or deep, frozen or free

224 Such old men, accompanying a hunting party, get both meat and skins, for the good hunters will not let them return empty-handed. They have, in general, and the Unami in particular, the custom that when a huntsman has shot a deer, and another Indian joins him or only looks on at a distance, he immediately gives him the whole animal and goes in pursuit of another.[40]

[411] The blowgun was in use among the Munsi by 1824, but was apparently present earlier; it was never of any great economic importance.[41] "Calls" were made to attract deer and turkeys. The deer call or "bleat" was made of cedar and was used primarily during the spring and early summer before the fawns had been weaned.[42] Harrington mentioned that "the deadfall and the 'twitchup' snare seem to have been the most popular varieties of traps."[43] The Delawares were also reported to be excellent stalkers of game and pursued wounded animals until their prey dropped from exhaustion.[44] If a hunter could not at first get within range of a deer he would chase it until he could, this procedure perhaps consuming an entire day.[45] One eighteenth-century author mentioned that deer were hunted by torchlight at night.[46]

[481]

226 Fishing.—Van der Donck said that Delawaran peoples "use all kinds
[252 of fish, which they commonly cook without removing the entrails, and
262] snakes, frogs and the like."[47] Specifically, they caught and ate rock
fish, shad, yellow perch, trout, eels, catfish, sunfish, sturgeon, and un-
[225] doubtedly others, from both fresh and salt water. In 1756 two harbor seals were shot and eaten, but this was an unusual incident.[48] Tortoises were caught, and shellfish in large quantities must have been taken, if Skinner was correct in attributing shell mounds of the area to the Delawares.[49] Juet stated that the natives brought out quantities of oysters to trade to the crew of Hudson's Half Moon.[50]

Methods of fishing varied somewhat; Lindestrom described a method in which a stream was dammed when the water was high, so that fish were stranded behind the dam when the water was low. The fish were caught with bare hands or shot with the bow and arrow.[51] De Rasieres
[283] said that the Indians around Manhattan caught fish with "a drag-net they themselves knit very neatly, of the wild hemp, from which the women and men spin the thread."[52] Brinton mentioned fishhooks of bone and dried claws of birds, and Pastorius reported the use of hooks.[53] Har-
[278] rington mentioned several methods of fishing. These may not be aboriginal since they do not appear elsewhere. He stated that fish were stupefied by large quantities of crushed green walnuts thrown into ponds. He also noted spearing and shooting of fish at night by torchlight.[54] Fish

252
262 Flour was either ground between two stones or pounded in a mortar and pestle by the Delaware. The mortar was usually a hollowed tree trunk, the pestle a suitably shaped stone (Smith, p. 138; [412] Lindstrom, pp. 253-54; Abbott, 1875, p. 357; Kalm, p. 230).

276 Stone pottery and clay pipes have been uncovered on archae-[323] ological sites. Lindstrom describes the Lenape pipes as beautifully painted and glazed with birds and animals on the head. He says 324 there are some "...an ell in length, which are screwed together with leather,...and in these pipe-heads will go a handful of tobacco" (Lindstrom, p. 197). These were presumably of European manufacture. The pipes which have been recovered from old sites are of a much humbler variety (Abbott, 1875, pp. 343-44; Skinner, 1909, p. 27; Butler, p. 249). This apparent inconsistency can be readily explained, however, by assuming that Lindstrom was referring to the calumets or peace pipes, which were relatively rare and would be likely to have been carried west by the owners when they moved (Kalm, pp. 231-32).

285 Some household items manufactured by the Delaware women were mats, ropes and baskets made from wild hemp, spruce roots, corn [283] husks and rushes. The mats, which were sometimes painted or had figures worked in or over the weave, were hung on the walls for increased protection against the elements as well as to beautify the house (Smith, p. 138; Lindstrom, p. 221; Harrington, 1913, p. 224). They were also used as part of the bedding together with the skin or 287 turkey-feather robes which served as clothing during the day (Johnson, p. 280; Heckewelder, 1881, p. 203). The turkey-feather robes deserve special attention as they were evidently one of the most distinctive and beautiful of the Delaware's manufactures. Lindstrom says: "They also make fine and beautiful quilts of painted bird feathers. In the first place they tie them with meshes like nets, yet very fine; then they fasten the feathers in the meshes, so neat and strong that not one feather can come loose from it..." (Lindstrom, pp. 221-22). When there was a "bed," it consisted of a wooden 352 shelf running around the interior wall of the house and serving as a seat by day (Harrington, 1913, p. 218; Zeisberger, 1910, p. 17; Skinner, 1915, p. 7).

342 The most common type of Delaware house was a small hut consisting of a rectangular, gabled frame of saplings covered with bark or mats. Penn describes their houses thus: "Their Houses are Mats, or Bark of Trees set on Poles, in the fashion of an English Barn, but out of the power of the Winds, for they are hardly higher than a Man..." (Penn, p. 31). Some Delaware, however, constructed a house large enough to accommodate several families, the increase in size all deriving from greater length. The result was not unlike an Iroquois longhouse.[6] In the center of the house was one or more fires depending on the length of the building, and the ridge of the roof was arranged with an opening through which the smoke could
